

Bandspeed Announces Certification of AirMaestro™ WLAN Platform with ShoreTel's Pure IP Unified Communications System

Bandspeed Completes ShoreTel's Technology Partner Program Certification

AUSTIN, TX – January 14, 2008 – Bandspeed today announced that the company has completed the Technology Partner Program (TPP) Certification and that the AirMaestro WLAN platform has been approved for use with the ShoreTel unified communications system. The completed certification demonstrates interoperability between industry-leading solutions from Bandspeed and ShoreTel, and validates the AirMaestro solution as an enterprise-class WLAN designed to support voice.

The Technology Partner Program Certification will enable companies to confidently extend their ShoreTel unified communications system over high-performance, secure wireless networks that support seamless mobility within the enterprise by deploying a Bandspeed AirMaestro WLAN. The AirMaestro WLAN platform, consisting of AirMaestro Access Points (APs) that are centrally monitored and managed with AirMaestro WLAN Management Software, supports quality-of-service standards, intelligent interference avoidance, AP load balancing and fast roaming features required to support voice over a WLAN.

“Bandspeed is pleased to announce that it has received ShoreTel's Technology Partner Program Certification,” said Bill Eversole, president and CEO, Bandspeed. “Through this validation, we are now able to extend to customers a certified WLAN solution that supports voice calls, enhancing employee communications and connectivity.”

“Our customers are our number one priority, and they expect only the best from our products and services,” said Steve Timerman, vice president of product management, ShoreTel. “The Bandspeed AirMaestro solution certified by our Technology Partner Program ensures that our customers have a WLAN solution that is interoperable with our products.”

ShoreTel's Technology Partner Program certifies companies offering products that complement and extend the ShoreTel IP unified communications system's capabilities, providing customers with hardware and software options to optimize their communications infrastructure and investment. Membership in the Technology Partner Program requires that all companies pass ShoreTel's interoperability certification testing in ShoreTel's test lab. Partners are also required to provide integration documentation that makes it easy for customers to leverage these solutions in their networks.

Bandspeed recently announced the introduction of its wireless LAN equipment and management software to be sold directly to the small-to-medium enterprise market through Bandspeed and authorized resellers. The new AirMaestro 3100AG Virtual Controller Access Point combined with Bandspeed's AirMaestro WLAN monitoring and management software is a complete WLAN solution. The AirMaestro WLAN solution integrates simultaneous, dual-band Wi-Fi access, wireless security and spectral analysis into an automated, cost-effective system that is easy to deploy, manage and use.

Bandspeed's AirMaestro distributed intelligence architecture is designed from the ground up to meet the needs of SMEs. While large-enterprise WLAN solutions are too complex and expensive and consumer-grade APs lack the critical features required for enterprise deployments, AirMaestro brings enterprise-class performance and features to the mass market.

About Bandspeed

Bandspeed is the leader in next-generation Wi-Fi infrastructure solutions for the small-to-medium enterprise, delivering WLAN platform and management solutions that enable mission-critical Wi-Fi voice, data and video applications. Bandspeed AirMaestro is an 802.11 network solution consisting of a Wi-Fi CERTIFIED® AP and WLAN Management software. Bandspeed is privately held and headquartered in Austin, Texas.
